26 May 1969

MEMORANDUM FOR: Chief, Photogrammetry Division, IEG

SUBJECT: Improved Rear Projection Screen Material Test

REFERENCE: DED Memorandum, NPIC/TSSG/DED-1523-69, Dated 27 February 1969

1. In the referenced memorandum, DED requested that the ☐ Dual Screen Measuring Projector be made available for testing some samples of improved rear-projection screen material.

25X1

2. Recent changes in the test procedure plus possible hazards to personnel when using the ☐ Projector in the planned manner dictate that another piece of equipment be used for the screen test. Permission has been obtained from the Production Services Group to use their ☐ ☐ Film Viewer, therefore your ☐ Projector will not be required.

25X1

3. You are also advised that it will not be necessary to remove the high power (12 1/8" X 15 1/8" X 1/4") screen from the ☐ projector for use as a commercially available comparison in the test as originally planned. A piece of Polacoat Type IS-75 screen has been obtained for this purpose from another source. Also, since the use of the ☐ Projector for the screen test has never progressed beyond the planning stage, the instrument has not been altered in any way.
